CERTIFICATE

Date:00/00/2026

This is to certify that **Om Dinesh Patel** of BCA – SEM - IV **(Seat No.____) and Enrolment No:- 12401020801052** has worked on project entitled **Invoice Management System** from **00/00/2025 to 00/00/2026**. This Software Development SWD **(**101020406**)** is an in-house project course of two credits.

He was regular in his work and developed the project including analysis and design. He has completed the project satisfactorily.

Principal
Project Guide

Acknowledgement

I would like to express my sincere gratitude to all those who helped me in the successful completion of this project on *"Invoice Management System"*.

First and foremost, I would like to thank my project guide Mr Maulin Punjabi for their valuable guidance, continuous support, and encouragement throughout the development of this project. Their suggestions and insights have been extremely helpful in completing this work effectively.

I am also thankful to the faculty members of my department for providing the necessary knowledge and resources required for this project.

I would like to extend my heartfelt thanks to my friends and classmates for their support, cooperation, and valuable suggestions during the project work.

Finally, I express my deepest gratitude to my parents and family for their constant encouragement and moral support, which helped me complete this project successfully.

Thank You

(Om Patel)

Project Profile

Project Title: - Invoice Management System

Introduction:-

An Invoice Management System (IMS) is a tool that helps businesses create, send, receive, track, and manage invoices in an easy and organized way.

In simple terms, it is like a smart assistant that takes care of all your billing work so you don't have to worry about paperwork, missed payments, or calculation mistakes.

Instead of writing invoices by hand or managing them in scattered files, an invoice management system keeps everything in one place. It helps you:

This project is suitable for small and medium-sized businesses that require a simple yet effective billing solution

Features:-

- Admin Authentication
- Customer Management
- Product Management
- Invoice creation
- Invoice Management
- Printing Invoices
- Tax Calculation

An Existing System

In many small businesses, the existing system is usually **manual or semi-manual**. This means invoices are created using paper, basic calculators, or simple tools like spreadsheets. Staff members write or type invoice details, calculate totals by themselves, and print or email the invoice to customers.

Manual Invoice Creation – Invoices are written by hand or typed using basic tools like MS Word and many other platform but this is not Reliable.

Manual Calculations – Totals, taxes, and discounts are calculated using calculators, which can lead to mistakes.

Paper-Based Records – Invoices are stored in physical files and folders, which can get lost or damaged.

Time-Consuming Process – Preparing, sending, and tracking invoices takes a lot of time and effort.

Higher Risk of Errors – Human mistakes in calculations or data entry are common.

Limited Security – Paper documents can be easily misplaced, damaged, or accessed by unauthorized people.

Need of proposed System

In today's fast-moving business environment, managing invoices manually is time-consuming and prone to errors. The need for a proposed invoice management system arises because traditional methods involve a lot of paperwork, manual calculations, and separate record-keeping, which can lead to mistakes and delays. Businesses often face problems such as misplaced invoices, incorrect billing amounts, and difficulty in tracking pending or overdue payments. These issues can negatively affect cash flow and overall financial management.

- **To Reduce Manual Work** – The proposed system helps automate invoice creation, calculation reducing paperwork and human effort.
- **To Minimize Errors** – Automatic calculations of totals, reduce mistakes caused by manual calculations.
- **To Save Time** – Invoices can be created and sent quickly, improving overall work efficiency.
- **To Maintain Proper Records** – All invoice data is stored in one secure and organized system for easy access.
- **To Improve Security** – Digital storage protects invoice data from loss, damage, or unauthorized access.
- **Improved Client Experience** – A system that generates clean, professional, brand-aligned invoices and offers clients.

System Features

Admin Authentication:-

Admin Authentication is a security feature that allows only authorized to access the system. The admin must enter a valid username and password to log in. This prevents unauthorized people from viewing business data..

Customer Management:-

Customer Management allows the admin to manage customer information. The admin can add new customers, This feature keeps all inone place, making invoice creation easier and faster.

Product Management

Product Management helps in managing product details such as product name, price, stock quantity, The admin can add new products, edit existing products, or remove products that are no longer available. This ensures accurate product information during billing.

Invoice Creation

Invoice Creation allows the admin to generate invoices for customers. The admin selects the customer and products, enters the quantity, and the system automatically calculates the total amount. This reduces manual errors and saves time.

Invoice Management

Invoice Management helps in organizing and tracking all invoices. The admin can also allows searching for specific invoices. This improves financial tracking and record keeping.

Printing Invoices

The Printing Invoices feature allows the admin to print invoices in a clear and professional format. Printed invoices can be given to customers as proof of purchase.

Hardware and Software

- Hardware Requirements:

  The following is a list of minimum requirements of hardware,

  1. Laptop/Desktop
  2. Processor: Intel i3 or above
  3. Memory : Minimum 4GB RAM
  4. Hard Disk : Minimum 256GB Hard disk

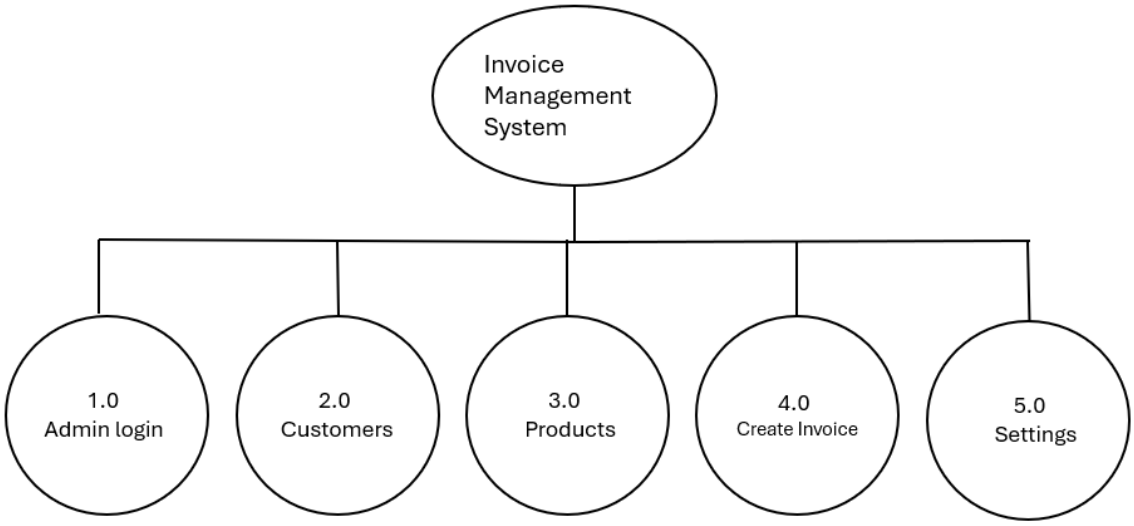

- Software Requirements:

  This system requires the following software

  1. OS: Windows 10/11
  2. PHP
  3. MySQL
  4. Server Environment: XAMPP / WAMP
  5. MS Power Point Presentation

Database Layouts

Table: Admin

Column Name	Data Type	Attributes & Constraint
Id	INT	AUTO_INCREMENT Primary Key
Username	Varchar(50)	Not Null
Password	Varchar(50)	Not Null

Table:Invoices

Column Name	Data Type	Attributes & Constraint
Id	INT	_AUTO_INCREMENT Primary Key
Customer_id	INT	Not Null
Invoice_date	Date	Not Null
Sub total	Decimal(10,2)	Not Null
Tax Rate	Decimal(5,2)	Null Yes
Tax Amount	Decimal(10,2)	Null Yes
Grand_total	Decimal(10,2)	Not Null

Table:Invoice_items

Column Name	Data Type	Attributes & Constraint
Id	INT	_AUTO_INCREMENT Primary Key
Invoice_id	INT	Not Null
Product	Varchar(100)	Not Null
qty	INT	Not Null
Price	Decimal(10,2)	Not Null
Line Total	Decimal(10,2)	Not Null

Table:Products

Column Name	Data Type	Attributes & Constraint
Id	INT	AUTO_INCREMENT Primary Key
Name	Varchar(200)	Not Null
Price	Decimal(10,2)	Not Null
Description	Text	Null Yes

Table:Customers

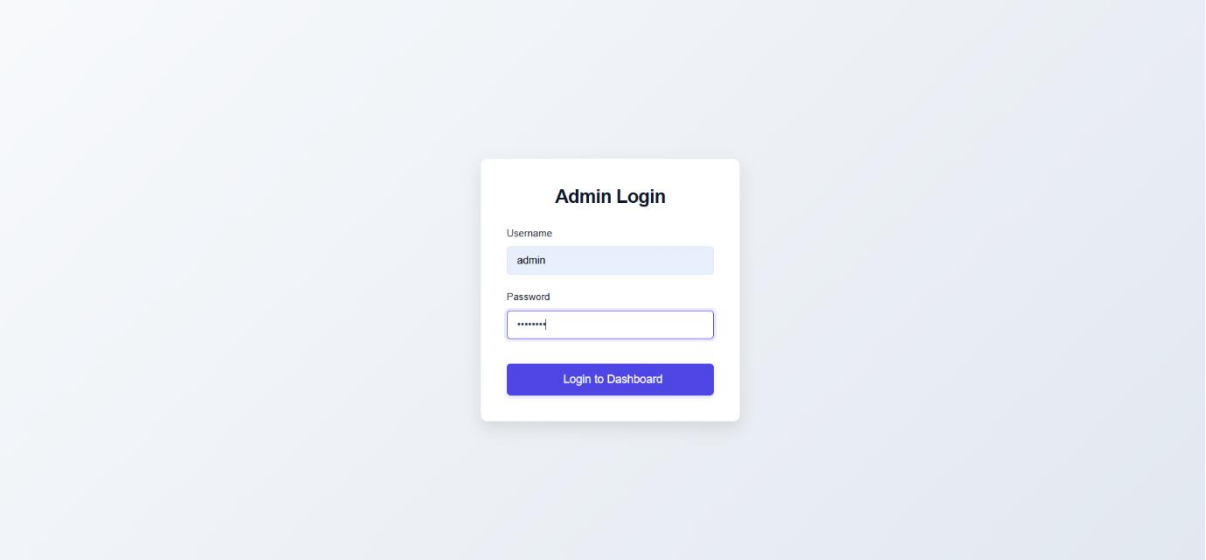

Column Name	Data Type	Attributes & Constraint
Id	INT	AUTO_INCREMENT Primary Key
Name	Varchar(200)	Not Null
Email	Varchar(200)	Not Null
Phone	Varchar(50)	Null Yes
Address	Text	Null Yes

Table:Settings

Column Name	Data Type	Attributes & Constraint
Id	INT	AUTO_INCREMENT Primary Key
Company_Name	Varchar(200)	Not Null
Company_Email	Varchar(200)	Null Yes
Company_Phone	Varchar(50)	Null Yes
Company_Address	Text	Null Yes

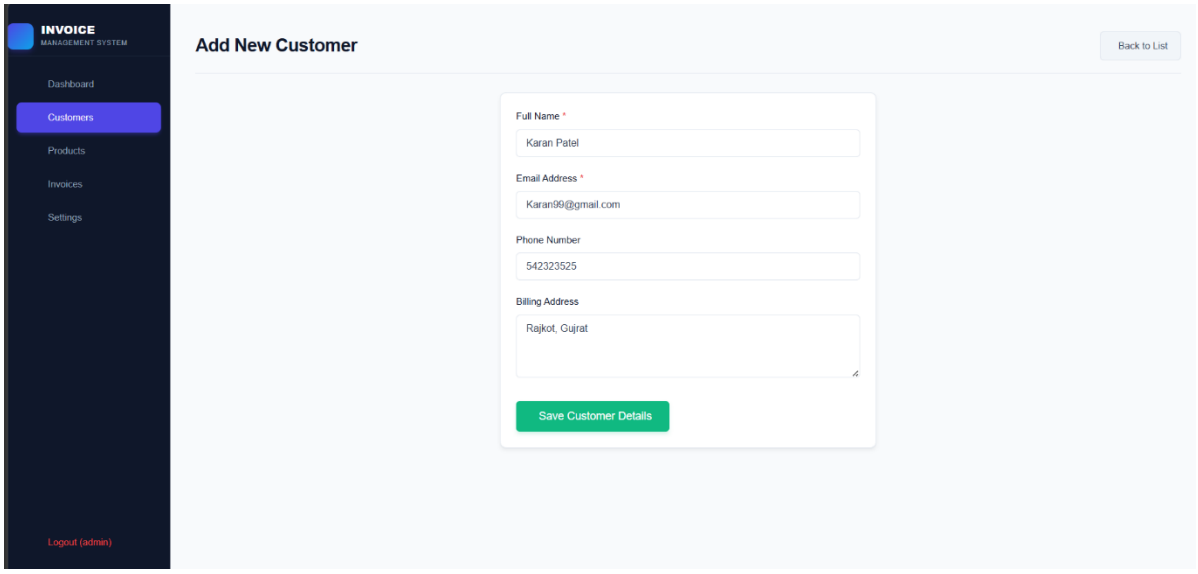

Design Of Input Screens

- Login Page

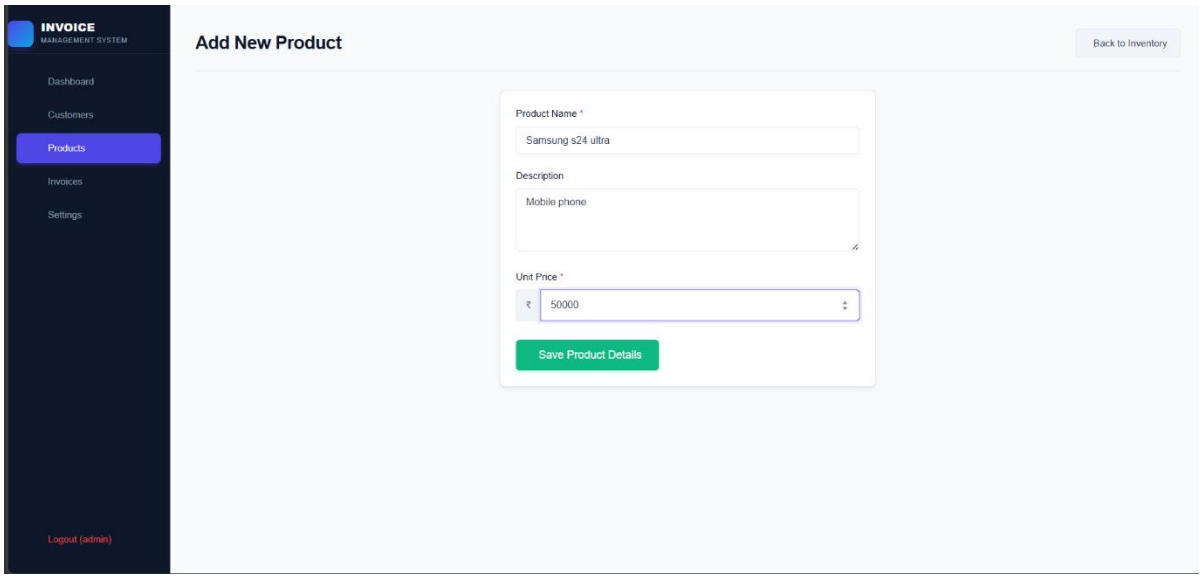

- This screen displays the Login form of the Invoice Management System.
- In the login form, you enter your Username and password, then click the Login button to be redirected to the Home page.
- Invalid credentials display an error message on the same page.

➢ Add Customer

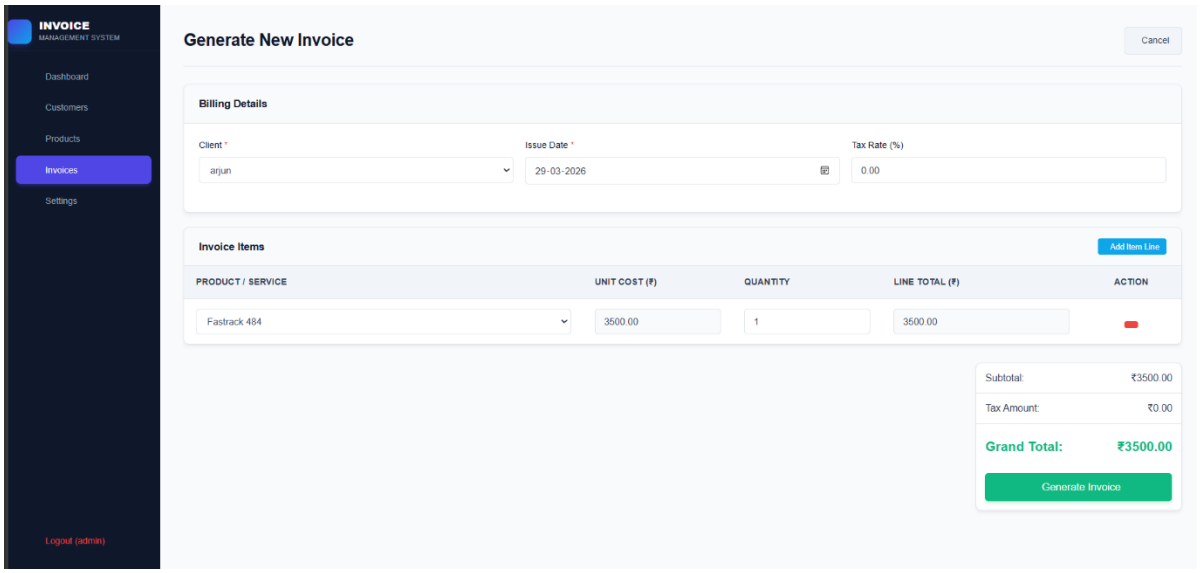

- This screen displays the form to add new customer details in the Invoice Management System.
- In this form, the user enters Full Name, Email Address, Phone Number, and Billing Address
- After entering the details, the user clicks on the **Save Customer Details** button to store the information in the database

➢ Add Product

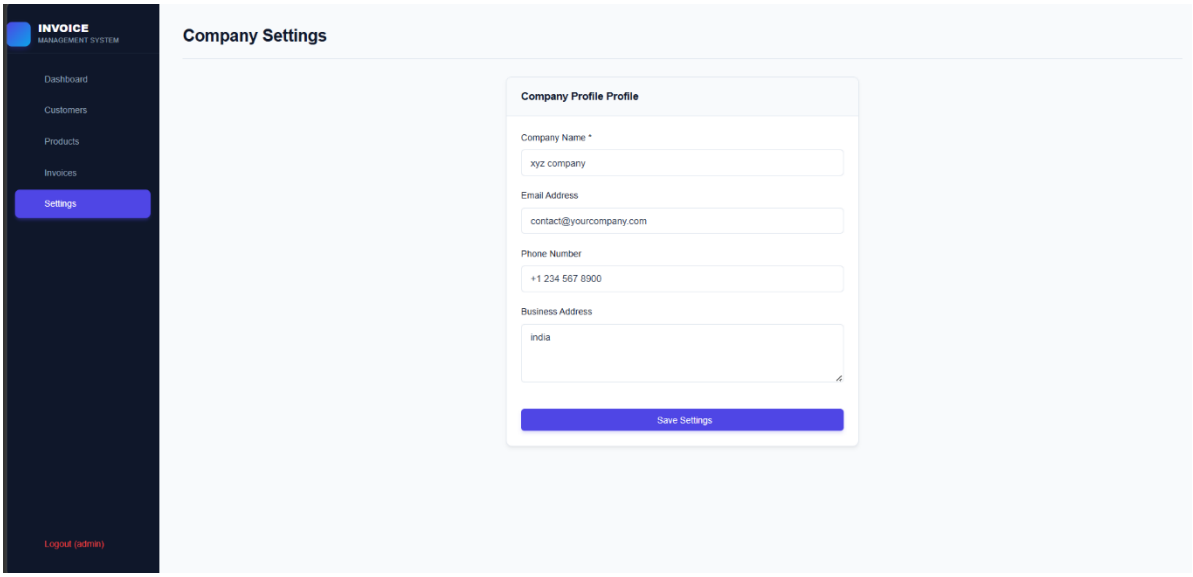

- This screen is used to add new product.
- The admin enters Product Name, Description, and Unit Price in the form.
- The Unit Price field includes currency (₹) for clarity.
- After filling the form, the admin clicks on the **Save Product Details** button to save the product.
- This data is later used during invoice creation.

➢ Create Invoice

- This screen is used to generate a new invoice for customers.
- In the Invoice Items section, the admin selects products, enters quantity, and the system automatically calculates the line total.
- The system dynamically calculates Subtotal, Tax Amount, and Grand
- The Add Item Line button allows adding multiple products.
- After completing the details, the admin clicks on the Generate Invoice button to create the invoice.

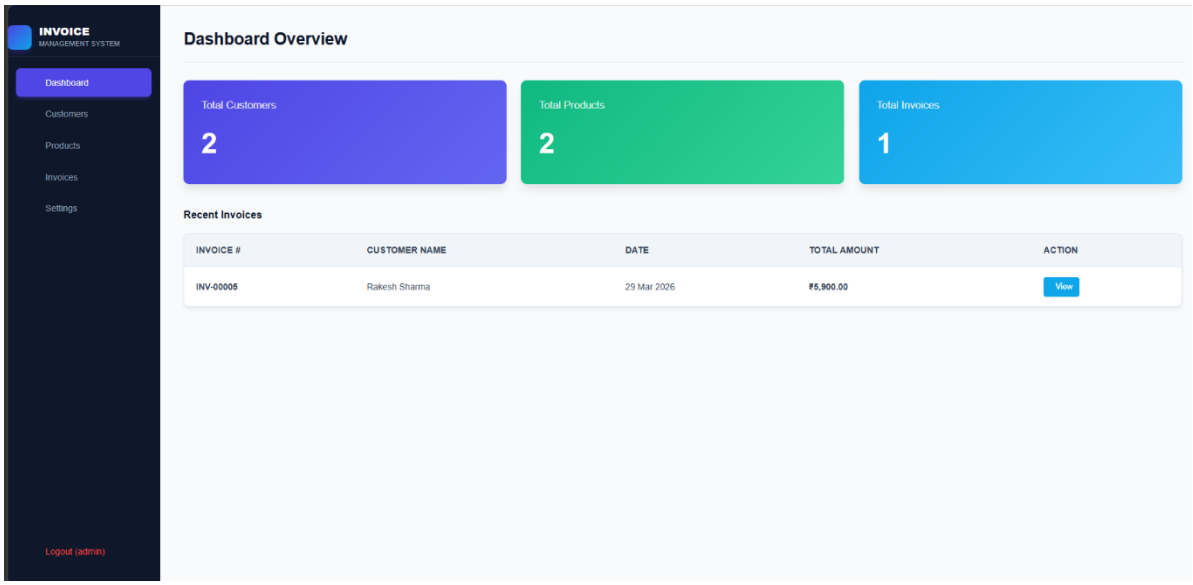

➢ Settings

- This screen displays the company settings form of the Invoice Management System.
- In this form, the admin enters company details such as Company Name, Email Address, Phone Number, and Business Address.
- These details are used while generating invoices to display company information.
- After entering or updating the details, the admin clicks on the Save Settings button to store the information.
- The form is designed in a clean and centered layout for better usability and readability.

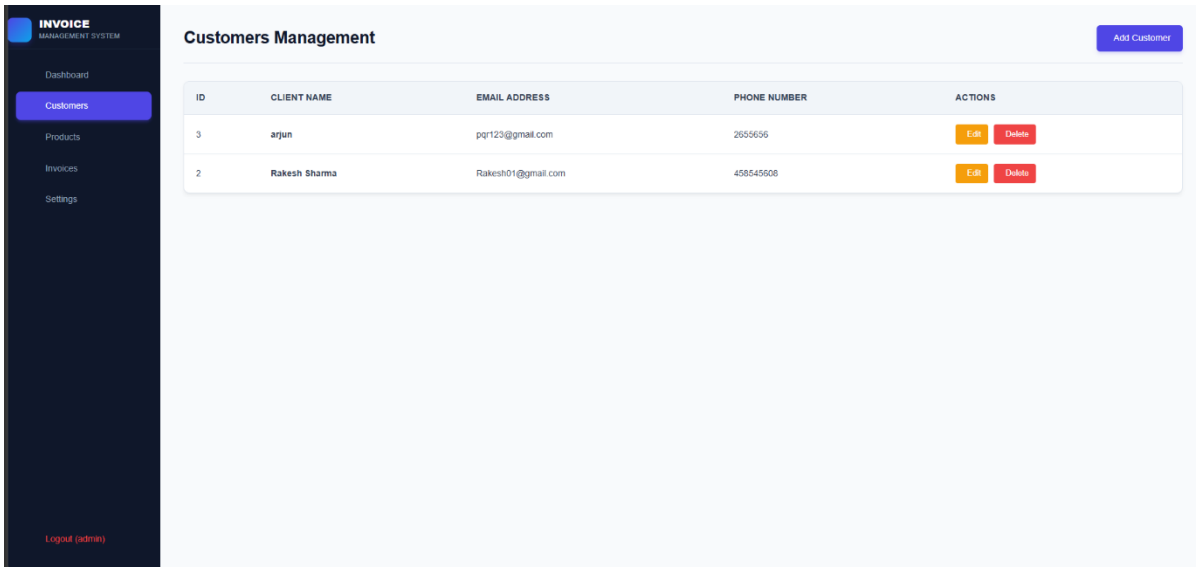

Design Of Output Screens

➢ Dashboard

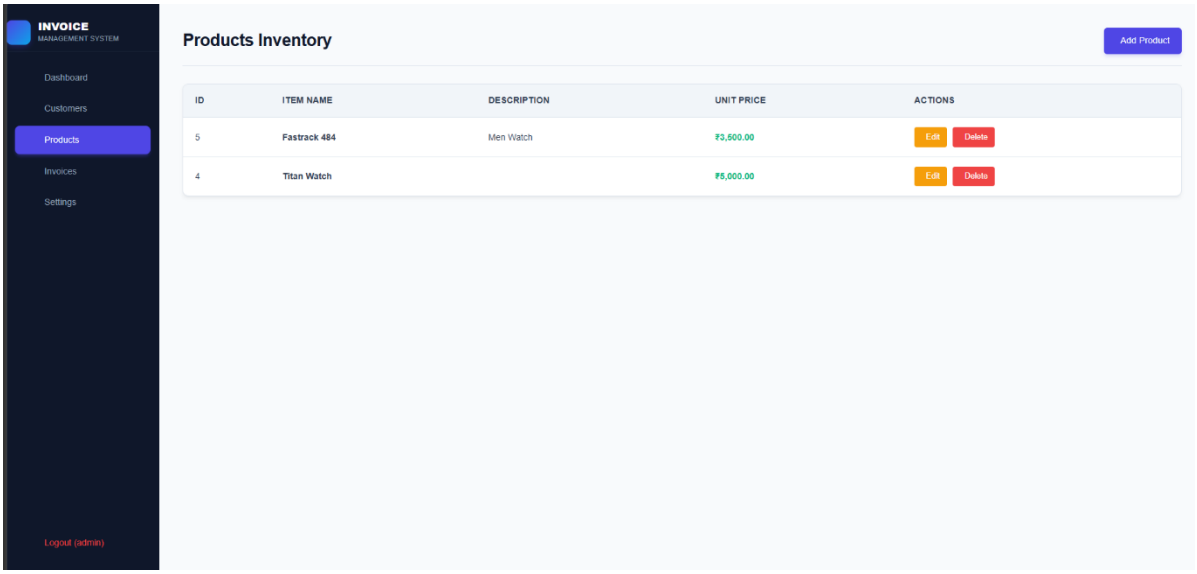

- This screen displays an overview of the system.
- It shows total number of Customers, Products, and Invoices using card layout.
- Recent invoices are displayed in a table format.
- This helps the admin to quickly understand system activity.

➢ Customers Management

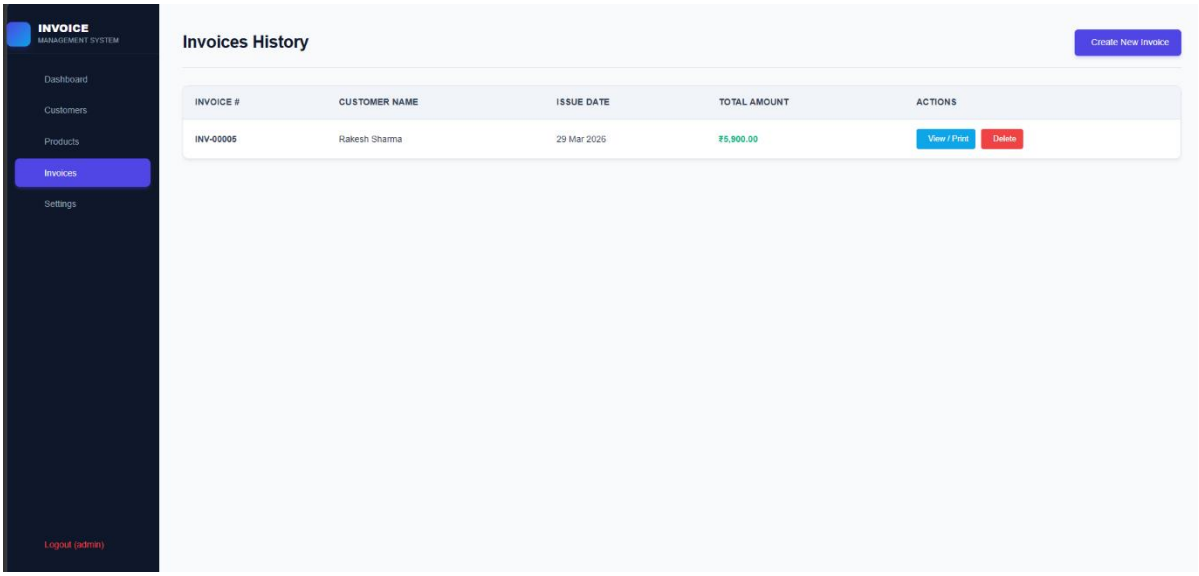

- This screen displays all customer records in tabular format.
- It includes details such as ID, Customer Name, Email Address, and Phone-Number.
- The Edit button allows updating customer details.
- The Delete button removes a customer from the system.
- The Add Customer button is provided to insert new records

➢ Product Inventory

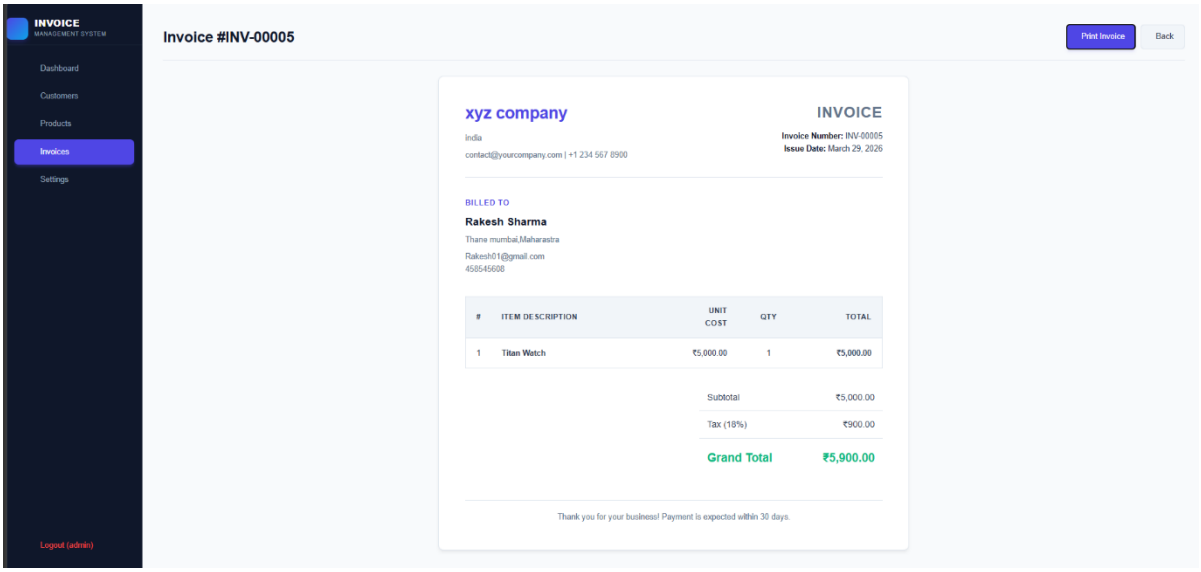

- This screen shows all products available in the system.
- It displays Product Name, Description, and Unit Price.
- The admin can edit or delete product records using action buttons.
- The Add Product button allows adding new products.

➢ Invoice History

- This screen displays all generated invoices.
- It includes Invoice Number, Customer Name, Issue Date, and Total Amount.
- The View/Print button allows viewing or printing the invoice.
- The Delete button removes the invoice from the system.
- The Create New Invoice button is used to generate a new invoice

➢ Invoice View

- This screen displays the generated invoice details in a structured format.
- It shows company information such as Company Name, Address, Email, and Phone Number at the top.
- Invoice details like Invoice Number and Issue Date are displayed on the right side.
- A table is used to display invoice items with columns such as Item Description, Unit Cost, Quantity, and Total.
- The system calculates and displays Subtotal, Tax Amount, and Grand Total automatically.
- The Grand Total is highlighted for better visibility.
- The **Print Invoice** button allows the user to print or download the invoice.
- The **Back** button is provided to return to the invoice list page.

Limitations

1.High Initial Cost

Some invoice management systems require software purchase, setup fees, or subscription charges, which can be expensive for small businesses.

2. Training Requirement

Employees may need proper training to use the system effectively. Without training, mistakes can still happen.

3. Technical Issues

System errors, software bugs, or server problems can interrupt work and delay invoice processing.

4. Internet Dependency

Cloud-based systems require a stable internet connection. If the internet is slow or unavailable, access to invoices may be affected.

Conclusion

An Invoice Management System plays an important role in simplifying and organizing the billing process of a business. It helps automate invoice creation, calculation, tracking, and record maintenance, reducing manual work and minimizing errors. By storing all customer, product, and invoice details in one secure system, it improves efficiency, accuracy, and transparency.

Therefore, implementing an Invoice Management System is a smart step for businesses that want to save time, improve financial control, and support long-term growth.
